edition has been completely revised and expanded to cover the whole of the UK. The new edition explains more fully the planning policies and actions of the European Union and takes into account the implications of local government reorganization, the 'planned system' and the growing interest in promoting sustainable development.

Town and country planning has never been more important to the UK, nor more prominent in national debate. Planning generates great controversy: whether it's spending £80m and four years' inquiry into Heathrow's Terminal

5, or the 200 proposed wind turbines in the Shetland Isles. On a smaller scale telecoms masts, take-aways, house extensions, and even fences are often the cause of local conflict. Town and Country Planning in the UK has been extensively revised by a new author group. This 15th Edition incorporates the major changes to planning introduced by the coalition government elected in 2010, particularly through the National Planning Policy Framework and associated practice guidance and the Localism Act. It provides a critical discussion of the systems of planning, the procedures for managing

development and land use change, and the mechanisms for implementing policy and proposals. It reviews current policy for sustainable development and the associated economic, social and environmental themes relevant to planning in both urban and rural contexts. Contemporary arrangements are explained with reference to their historical development, the influence of the European Union, the roles of central and local government, and developing social and economic demands for land use change. Detailed consideration is given to • the nature of planning and its historical

neighbourhood level planning; the transition from development control to development management; the continued and growing importance of environmental matters in planning; community engagement; partnership working; changes to planning gain and the introduction of the Community Infrastructure Levy; and new initiatives across a number of other themes. Notes on further reading are provided and at the end of the book there is an extensive bibliography, maintaining its reputation as the 'bible' of British planning.

This 2001 book was the first survey of relations between town and country across Europe between 1300 and 1800.

Land Use and Town and Country Planning is a 14-chapter text that provides statistical data on human land use and town and country planning, with particular emphasis on the Great Britain land statistics. The opening chapters deal with the concepts of land and land use, measurement, and the adoption of the metric system. The succeeding chapters

are devoted to land statistics for agriculture, forestry, recreation, conservation and amenity, and other rural land uses. These topics are followed by discussions of urban land estimates and use, as well as land utilization surveys. The final chapters describe the potential of maps, air photography, and improvements in land-use records. This book will prove useful to workers and researchers in the general field of planning.

and Egypt relating to each country's unique colonial history and dependence on a constantly changing global economy since the early nineteenth century. Using historical data, Chaichian argues that the development of dependent economies has led to displacement of the rural population and migration to major urban centers such as Tehran in Iran and Cairo and Alexandria in Egypt. The findings of this study also indicate that by the mid-1970s Iran and Egypt were fully incorporated into the global economy, but in various degrees have since resisted the systemic demands of the new

This thirteenth edition has been completely revised to take into account all the changes that have occurred in British planning, including the policies introduced by the Labour government, devolution, innovations and the European Union.
