Written by experts in both mathematics and biology, Algebraic and Discrete Mathematical Methods for Modern Biology offers a bridge between math and biology, providing a framework for simulating, analyzing, predicting, and modulating the behavior of complex biological systems. Each chapter begins with a question from modern biology, followed by the description of certain mathematical methods and theory appropriate in the search of answers. Every topic provides a fast-track pathway through the problem by presenting the biological foundation, covering the relevant mathematical theory, and highlighting connections between them. Many of the projects and exercises embedded in each chapter utilize specialized software, providing students with much-needed familiarity and experience with computing applications, critical components of the "modern biology" skill set. This book is appropriate for mathematics courses such as finite mathematics, discrete structures, linear algebra, abstract/modern algebra, graph theory, probability, bioinformatics, statistics, biostatistics, and modeling, as well as for biology courses such as genetics, cell and molecular biology, biochemistry, ecology, and evolution. Examines significant questions in modern biology and their mathematical treatments Presents important mathematical concepts and tools in the context of essential biology Features material of interest to students in both mathematics and biology Presents chapters in modular format so coverage need not follow the Table of Contents Introduces projects appropriate for undergraduate research Utilizes freely accessible software for visualization, simulation, and analysis in modern biology Requires no calculus as a prerequisite Provides a complete Solutions Manual Features a companion website with supplementary resources

A comprehensive guide to full-time degree courses, institutions and towns in Britain.

One of a series, this book gives information on Arts, Humanities and language first degree courses. It is divided into subject chapters, with courses arranged alphabetically by title and institution. Each course entry includes the course length, mode of study, UCAS code and entrance requirements.

Provides information for students wishing to narrow their choice of course before turning to prospectuses - saving them precious time when they need it most. Grouped by study field, this volume is divided into subject chapters with courses arranged alphabetically by title and institution.

Studying Literature in English provides the ideal point of entry for students of English Literature. This book is an accessible guide for Literature students around the world. This book: Grounds literature and the study of literature throughout by referencing a selection of well-known novels, plays and poems Examines the central questions that readers ask when confronting literary texts, and shows how these make literary theory meaningful and necessary Links British, American and postcolonial literature into a coherent whole Discusses film as literature and provides the basic conceptual tools in order to study film within a literature-course framework Places particular emphasis on interdisciplinarity by examining the connections between the study of literature and other disciplines Provides an annotated list of further reading From principal literary genres, periods and theory, to strategies for reading, research and essay-writing, Dominic Rainsford provides an engaging introduction to the most important aspects of studying literature in English. This book is invaluable reading for anyone studying literature in English.
