Technology Aztecs Ancient Innovations Naomi Aztec Technology: Weapons and Weaponry. Aztec technology used for making weapons mainly relied on the use of stone and copper. This was because Aztecs did not have access to iron and bronze. Before the use of copper for making weapons, they mainly relied on obsidian and chert.

Technology Aztecs Ancient Innovations Naomi Mccullough

Some of the salient accomplishments of Aztec technology include independent development of mathematics, development of a specialised Aztec calendar, invention of the canoe, and various helpful forms of medicine. Due to the absence of iron and bronze, their defence technology was not as advanced as the Spanish conquistadors.

Aztec Technology – History of the Ancient Aztec People and –

As a nation of warriors, there's little doubt that Aztec leaders often saw red. But thanks to one of their innovations, the Aztecs helped the rest of the world see it as well. Prior to the Spanish conquest of the Aztecs in the early 16th century, the European world had never experienced fabric dyed a deep scarlet color.

Top 5 Ancient Aztec Inventions | HowStuffWorks

The Aztecs are credited with a number of inventions, but in reality, most of their "inventions" were already well-known in Central America. It's more accurate to say the Aztecs popularized inventions such as popcorn and chewing gum by introducing them to the Spanish conquerors.

What Inventions Did the Aztecs Make? | The Classroom

Aztec Inventions: Antispasmodic medication The Aztecs practised advanced medicine. They used a type of antispasmodic medication - medicine that could prevent muscle spasms and relax muscles, which may have been helpful during surgery. The Passion flower was used for this purpose, a flower which still grows in Mexico today.

10 Innovations That Built Ancient Rome – HISTORY

Dams | the Aztec in Tenochtitlan constructed great dams during the heyday of the Aztec Empire. Tenochtitlan, the capital of the Aztec empire, was first built on a small island that was located in the western section of Lake Texcoco in 1325 CE. The Aztec created various large artificial islands around the small island using a system that was similar to building the chinampas (floating gardens in the lake that was used to grow food for the cities' population).

This book dives into the history of each Mesopotamian civilization and discusses which technologies continue to inspire societies today.

A guide to ancient accomplishments and inventions unearths the origins of modern creations, including computers in ancient Greece, plastic surgery in India in the first century B.C., and a postal service in medieval Baghdad

Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters. Technology matters, writes David Nye, because it is inseparable from being human. We have used tools for more than 100,000 years, and their central purpose has not always been to provide necessities. People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks. Perhaps this is because we are intimate with devices and machines from an early age|as children, we play with technological toys: trucks, cars, stoves, telephones, model railroads, Playstations. Through these machines we imagine ourselves into a creative relationship with the world. As adults, we retain this technological playfulness with gadgets and appliances|Blackberries, cell phones, GPS navigation systems in our cars. We use technology to shape our world, yet we think little about the choices we are making. In Technology Matters, Nye tackles ten central questions about our relationship to technology, integrating a half-century of ideas about technology into ten cogent and concise chapters, with wide-ranging historical examples from many societies. He asks: Can we define technology? Does technology shape us, or do we shape it? Is technology inevitable or unpredictable? (Why do experts often fail to get it right?)? How do historians understand it? Are we using modern technology to create cultural uniformity, or diversity? To create abundance, or an ecological crisis? To destroy jobs or create new opportunities? Should "the market" choose our technologies? Do advanced technologies make us more secure, or escalate dangers? Does ubiquitous technology expand our mental horizons, or encapsulate us in artifice? These large questions may have no final answers yet, but we need to wrestle with them|to live them, so that we may, as Rilke puts it, "live along some distant day into the answers."

From the author of the New York Times bestseller The Inevitable| a sweeping vision of technology as a living force that can expand our individual potential In this provocative book, one of today's most respected thinkers turns the conversation about technology on its head by viewing technology as a natural system, an extension of biological evolution. By mapping the behavior of life, we paradoxically get a glimpse at where technology is headed-or "what it wants." Kevin Kelly offers a dozen trajectories in the coming decades for this near-living system. And as we align ourselves with technology's agenda, we can capture its colossal potential. This visionary and optimistic book explores how technology gives our lives greater meaning and is a must-read for anyone curious about the future.

Are we alone? asks the writeup on the back cover of the dust jacket. The contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come. NASA SP-2013-4413.

Ancient Maya Commerce presents nearly two decades of multidisciplinary research at Chunchucmil, Yucatan, Mexico|a thriving Classic period Maya center organized around commercial exchange rather than agriculture. An urban center without a king and unable to sustain agrarian independence, Chunchucmil is a rare example of a Maya city in which economics, not political rituals, served as the engine of growth. Trade was the raison d'être of the city itself. Using a variety of evidence|archaeological, botanical, geomorphological, and soil-based|contributors show how the city was a major center for both short- and long-distance trade, integrating the Guatemalan highlands, the Gulf of Mexico, and the interior of the northern Maya lowlands. By placing Chunchucmil into the broader context of emerging research at other Maya cities, the book reorients the understanding of ancient Maya economies. The book is accompanied by a highly detailed digital map that reveals the dense population of the city and the hundreds of streets its inhabitants constructed to make the city navigable, shifting the knowledge of urbanism among the ancient Maya. Ancient Maya Commerce is a pioneering, thoroughly documented case study of a premodern market center and makes a strong case for the importance of early market economies in the Maya region. It will be a valuable addition to the literature for Mayanists, Mesoamericanists, economic anthropologists, and environmental archaeologists. Contributors: Anthony P. Andrews, Traci Arden, Sheryl Luzzadder-Beach, Timothy Beach, Chelsea Blackmore, Tara Bond-Freeman, Bruce H. Dahlin, Patrice Farrell, David Hixson, Socorro Jimenez, Justin Lowry, Aline Magnoni, Eugenia Mansell, Daniel E. Mazeau, Travis Stanton, Ryan V. Sweetwood, Richard E. Terry

This important and overdue book examines illuminated manuscripts and other book arts of the Global Middle Ages. Illuminated manuscripts and illustrated or decorated books|like today's museums|preserve a rich array of information about how premodern peoples conceived of and perceived the world, its many cultures, and everyone's place in it. Often a Eurocentric field of study, manuscripts are prisms through which we can glimpse the interconnected global history of humanity. Toward a Global Middle Ages is the first publication to examine decorated books produced across the globe during the period traditionally known as medieval. Through essays and case studies, the volume's multidisciplinary contributors expand the historiography, chronology, and geography of manuscript studies to embrace a diversity of objects, individuals, narratives, and materials from Africa, Asia, Australasia, and the Americas|an approach that both engages with and contributes to the emerging field of scholarly inquiry known as the Global Middle Ages. Featuring 160 color illustrations, this wide-ranging and provocative collection is intended for all who are interested in engaging in a dialogue about how books and other textual objects contributed to world-making strategies from about 400 to 1600.

"This innovative collection examines the transnational movements, effects, and transformations of religion in the contemporary world, offering a fresh perspective on the interrelation between globalization and religion. Taken as a whole, Transnational Transcendence challenges some widely accepted ideas about this relationship, in particular, that international contemporary religious manifestations are secondary to the primary economic phenomenon of globalization."--P. [4] of cover.
