Acute myocardial ischemia
manifests on ECG as ST deviation
(ST elevation or ST depression)
and T-wave changes. ST deviation
and T-wave changes are
collectively referred to as ST-T
changes. ST deviation indicates
acute (ongoing) ischemia. In most
cases ST deviations are
accompanied by T-wave changes.

occlusion of a coronary artery with a thrombus formation. This event causes necrosis of cardiac tissue and can predispose the patient to the development of multiple dysrhythmias and death. The blood supply to the myocardium is accomplished through arteries that lie on the outside of the heart supplying the various areas of the myocardium.
