Multi-volume major reference work bringing together histories of companies that are a leading influence in a particular industry or geographic location. For students, job candidates, business executives, historians and investors.

In the last decade, there has been an influx in the development of new technologies for deep space exploration. Countries all around the world are investing in resources to create advanced energetic materials and propulsion systems for their aerospace initiatives. Energetic Materials Research, Applications, and New Technologies is an essential reference source of the latest research in aerospace engineering and its application in space exploration. Featuring comprehensive coverage across a range of related topics, such as molecular dynamics, rocket engine models, propellants and explosives, and quantum chemistry calculations, this book is an ideal reference source for academicians, researchers, advanced-level students, and technology developers seeking innovative research in aerospace engineering.

Transportation in cities, with its related environmental and social concerns continues to be a topic of the utmost priority for urban authorities and central governments around the world. This is reflected in the proceedings of the Twelfth International Conference on Urban Transport and the Environment in the 21st Century, stressing the continuous steady growth and research into the urban transport systems control aspects, information and simulation systems. Papers cover topics such as: Transport Logistics and Operations Research; Transport Modelling and Simulation; Intelligent Transport Systems; Urban Yransport Planning and Management; Road and Parking Pricing; Public Transport Systems; Environmental and Ecological Considerations; Transport Sustainability; Infrastructure and Maintenance; Information Systems and GPS Applications; Transport Security and Safety; Transport Technology; Energy and Transport Fuels; Land Use and Transport Integration.
